EDUCATION

Manipal University Jaipur 2024 – 2028 (expected May 2028)
B.Tech, Computer Science & Bioscience (CSB) — 3rd Year

Ryan International School, Jaipur Class XII, 2024

SKILLS

Languages: JavaScript, TypeScript, Java, Python, C++, SQL, HTML, CSS
Frontend & Mobile: React, Next.js, Tailwind CSS, Bootstrap, Android (Java, Room, WorkManager), Electron
Backend & Data: Node.js, Express, Spring Boot, FastAPI, REST APIs, OAuth, PostgreSQL, Prisma, Supabase, Firebase
AI / LLM: Gemini API, RAG, embeddings, ChromaDB, MCP servers, Ollama
Tools: Git, Docker, Linux / WSL, CMake, GoogleTest, ThreadSanitizer, Vercel, Render, npm

PROJECTS

Second-Brain Search

Python · Gemini API · ChromaDB · MCP

- Built a RAG search-and-answer CLI over 17 of my own repositories (docs + git commit history, ~1.7k chunks) that cites its sources and refuses when nothing in the corpus answers the question
- Wrote an evaluation suite (14 questions incl. no-answer traps) to measure retrieval quality; exposed search to Claude through an MCP server where private repositories fail closed; 560 tests
- Worked within free-tier API limits with request/token pacing and a persistent embedding cache so interrupted index runs resume instead of re-embedding

Interview Prep Flashcards

Java · Spring Boot · Android · PostgreSQL · Gemini API

- Built a Spring Boot backend and native Android client for SM-2 spaced-repetition flashcards, with offline-first sync (Room cache, outbox, WorkManager) and AI-assisted card generation with review-before-save
- Shipped token auth (rotating refresh tokens, reuse detection, rate limiting) after a security audit and fixed token-refresh race conditions; deployed live on Render with Neon Postgres

Work-Stealing Task Scheduler

C++20 · CMake · GoogleTest · ThreadSanitizer

- Built a thread-pool library with per-worker deques, work stealing, submit() returning std::future and graceful drain-then-stop shutdown; 38 tests green under g++ and clang++ with ThreadSanitizer
- Found and fixed concurrency bugs test-first, including tasks stranded by a submit/stop race and a broken rollback that only one scheduling mode exposed

DSA Problem Tracker

Next.js · Supabase · PostgreSQL · Prisma

- Designed and deployed a full-stack spaced-repetition web app with a custom SM-2 scheduler, LeetCode metadata retrieval and analytics dashboards; found and patched an IDOR vulnerability in an independent audit

commit-gen (published npm package)

Node.js · Ollama · Gemini API

- Published an open-source CLI that writes Conventional Commit messages from staged diffs using a local LLM or Gemini, with git-hook automation, streaming output, retry and timeout handling, and lockfile/binary filtering
